Steelsa Dental, Geniř Cerrahi El Aleti Gamı İle

Diř Hekimlerinin Her İhtiyacına Çözüm Sunuyor.

 **Steelsa®**

Innovative Solutions, High Quality

Yenilikçi Çözümler, Yüksek Kalite

Steelsa Dental olarak, teknolojiyi yakından takip ediyor ve Ar-Ge çalışmalarımıza büyük önem veriyoruz. Ürünlerimiz, diş hekimlerinin işini kolaylaştırmak ve hasta konforunu artırmak amacıyla tasarlanmakta, her aşamada titizlikle test edilmektedir. Ergonomik tasarımlarımız ve dayanıklı malzeme seçimlerimiz, uzun ömürlü kullanım sağlar. Müşterilerimize sadece ürün değil, aynı zamanda güven ve destek sunmayı hedefliyoruz. Türkiye’de üretilen tüm ürünlerimiz, uluslararası kalite standartlarına uygun şekilde sertifikalandırılmıştır. Global pazarda adımızı duyurmak ve sektörde fark yaratmak için sürekli gelişmeye ve yenilikçi çözümler sunmaya devam ediyoruz

Vizyon: Yüksek kaliteli, ergonomik ve dayanıklı dental aletler sunmak.

Misyon: Dünya çapında diş hekimlerinin ve sağlık profesyonellerinin ilk tercihi olmak.

At Steelsa Dental, we closely follow technological advancements and place great importance on R&D activities. Our products are designed to facilitate dentists' work and enhance patient comfort, undergoing rigorous testing at every stage. Our ergonomic designs and durable material selections ensure long-lasting use. We aim to provide our customers not only with products but also with trust and support. All our products manufactured in Turkey are certified in accordance with international quality standards. We continuously strive to grow, innovate, and make a difference in the industry as we establish our name in the global market.

Vision: To provide high-quality, ergonomic, and durable dental instruments.

Mission: To become the first choice of dentists and healthcare professionals worldwide.

DAVYE EXTRACTION FORCEPS

Bu aletler sadece diş çekimi için tasarlanmıştır. Davyeler, önceden lükse edilen dişlerde kullanılmalı; diş çıkarmak için değildir, desteklemek amacıyla tercih edilmelidir.

These instruments are designed solely for tooth extraction. Elevators should be used on previously luxated teeth; they are not intended for removing the tooth, but rather for providing support.

EX-100 | 10'lü Yetişkin Davye Seti Kodu

DDS DAVYELERİ:

DDS davyeleri, optimum erişim ve üstün kron-kök kavrayışı sağlamak amacıyla özel olarak tasarlanmıştır. Her biri farklı tasarıma sahip 10 özgün model seçeneği ile geniş bir kullanım yelpazesi sunar ve çeşitli klinik ihtiyaçlara mükemmel uyum sağlar.

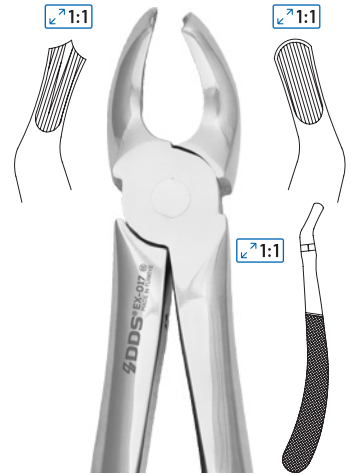

Geliştirilmiş uç geometrileri sayesinde DDS davyeleri, farklı zorluktaki çekim vakalarında etkin erişim, yüksek hassasiyet ve kullanım kolaylığı sunarak operasyonel başarıyı destekler.

ÇEKİM DAVYELERİ UÇ TASARIMLARI

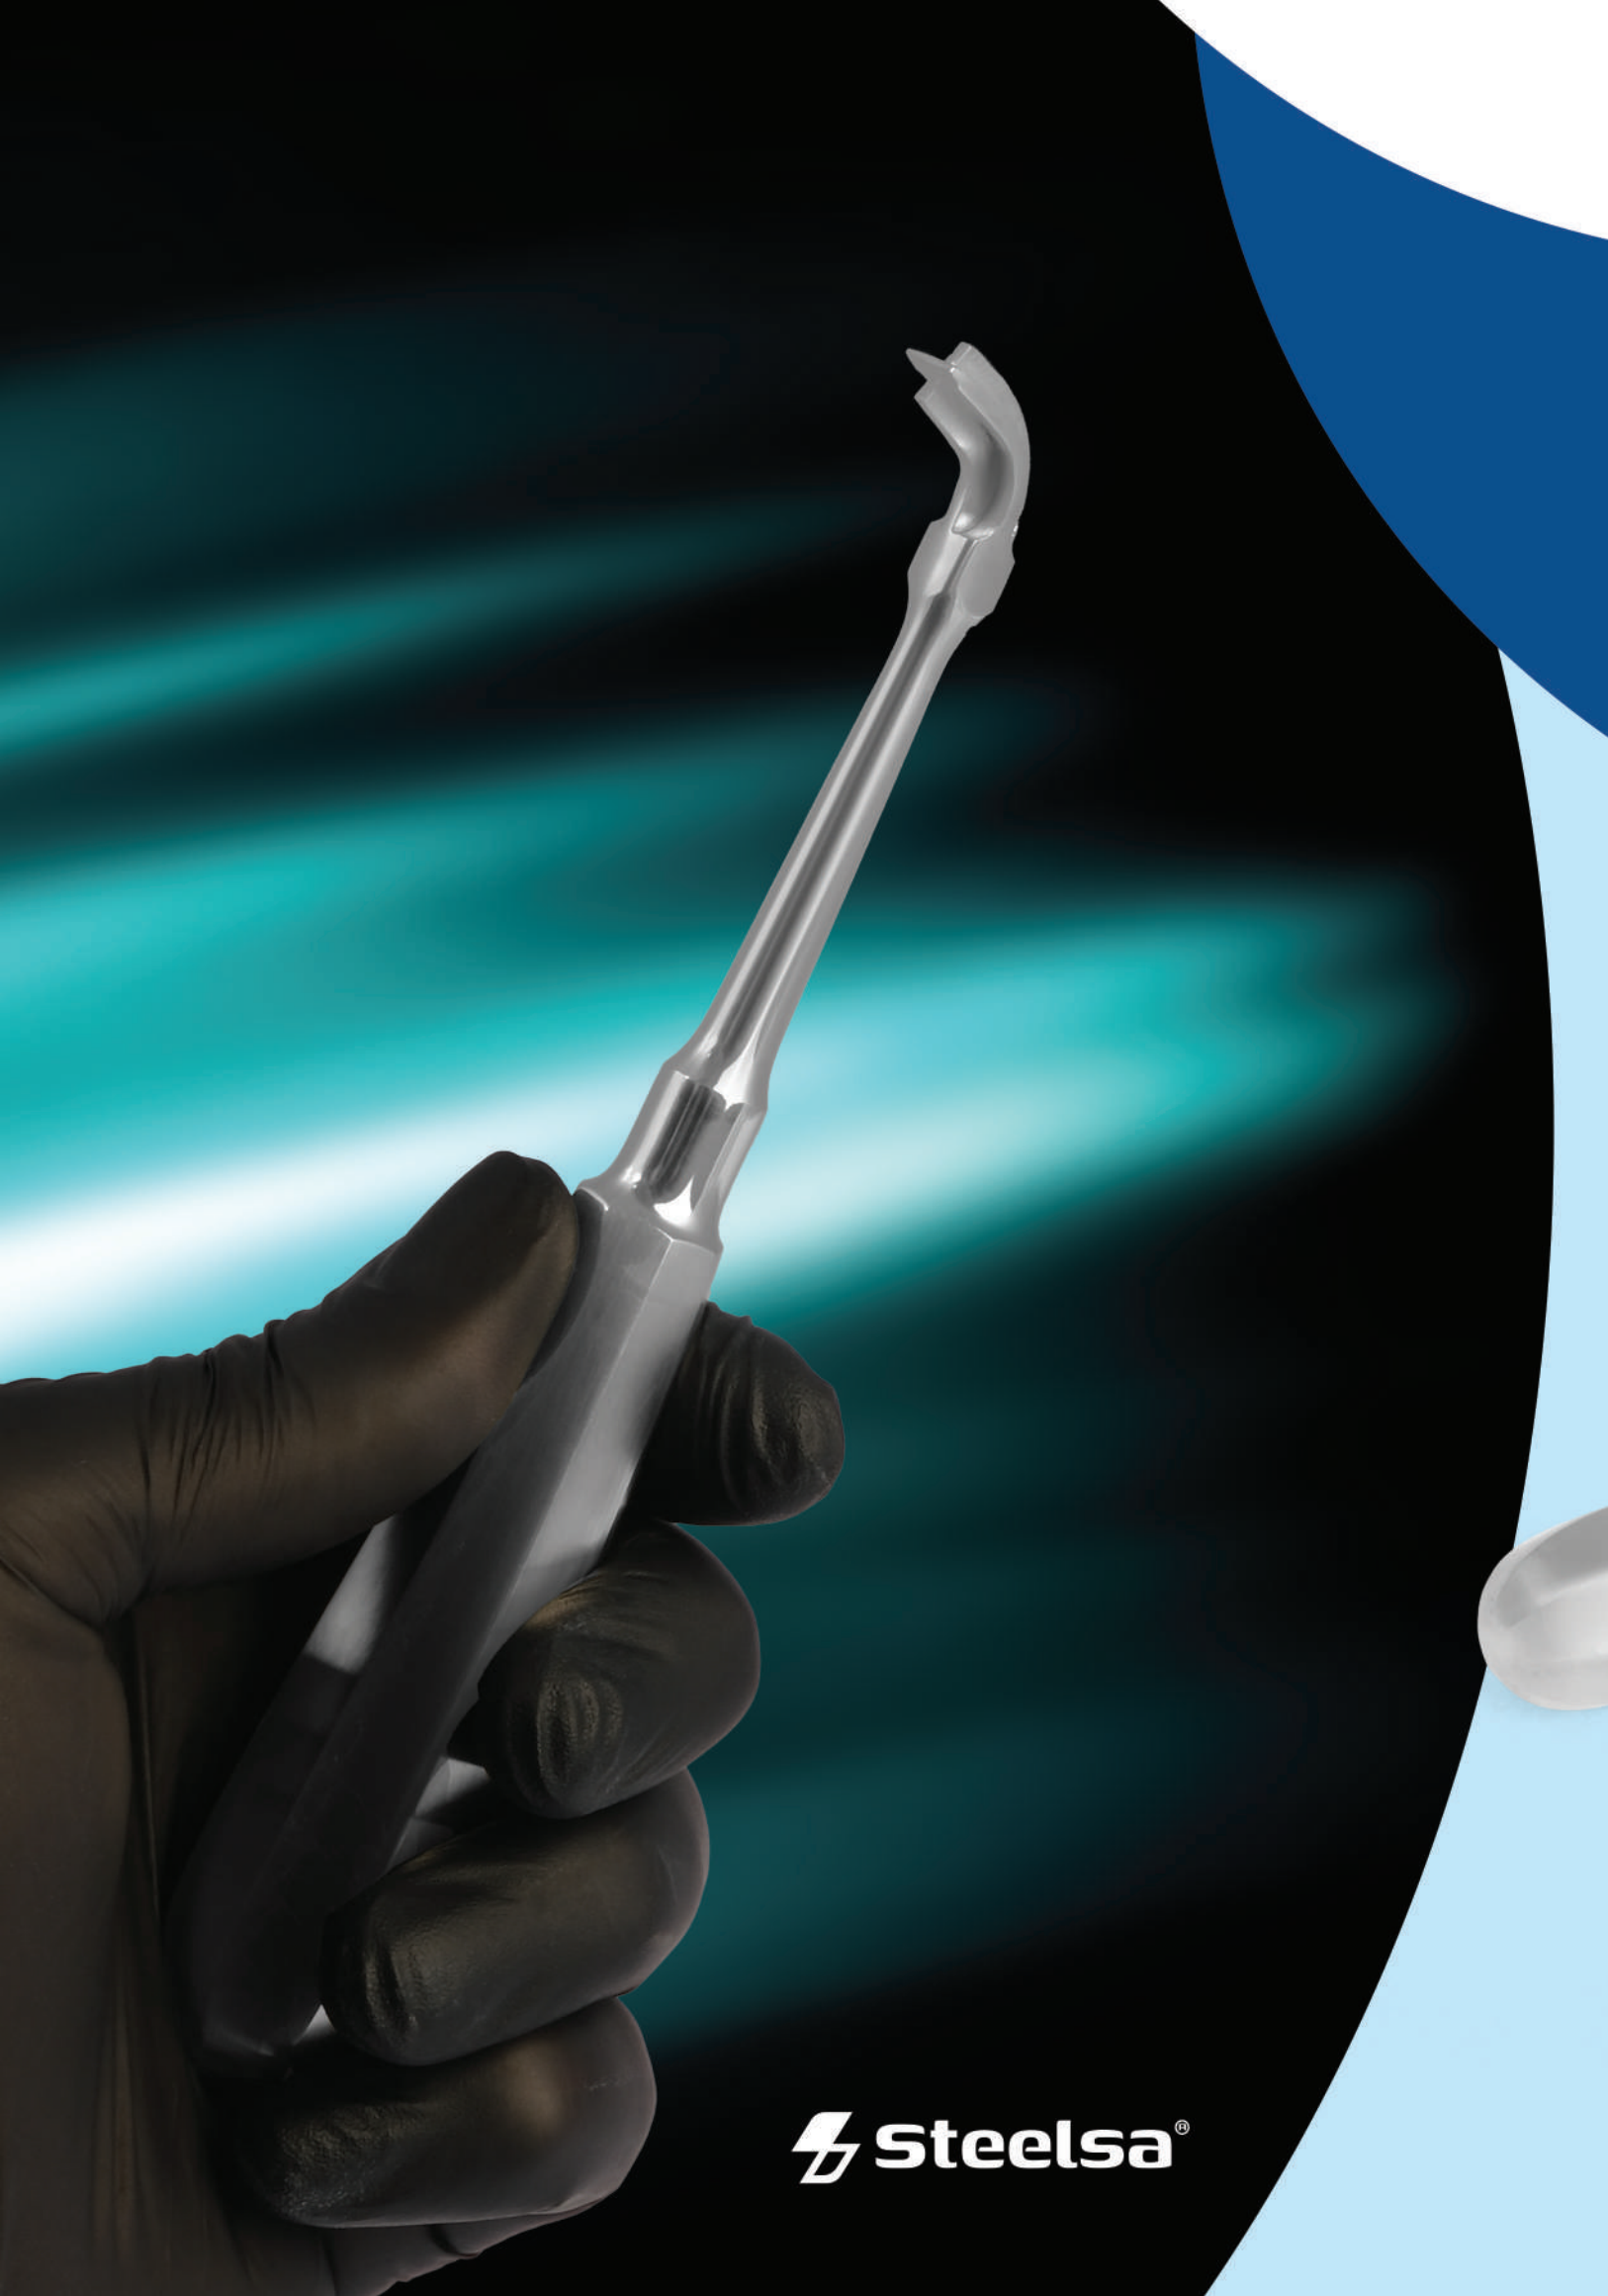

DDS çekim davyelerinin uçları, dişin servikal hattı hizasında veya altında anatomik olarak uyum sağlayacak şekilde tasarlanmıştır. Bu tasarım, dişin kök yüzeyine maksimum temas sağlayarak güvenli ve etkili bir çekim süreci sunar.

Davyelerin uçları, dişin kök yapısına uyum sağlamak amacıyla konik, bifurkasyonlu (iki çatallı) veya trifurkasyonlu (üç çatallı) olarak şekillendirilmiştir. Bu özel uç tasarımları, çok köklü dişlerin furkasyon bölgelerine daha iyi adapte olarak çekim sırasında stabilite sağlar.

Birçok davye ucu, iç yüzeyinde tırtıklı (serrated) yapıya sahiptir. Bu tırtıklı yüzeyler, dişi daha sağlam kavrayarak çekim sırasında kayma riskini azaltır ve cerrahi kontrolü artırır.

DDS davyeleri, farklı kök morfolojilerine uyum sağlayan bu uç tasarımları sayesinde, çeşitli çekim vakalarında güvenilir ve etkili çözümler sunar.

 **Steelsa®**

ELEVATÖR ELEVATOR

Son derece ince ve keskin bıçağı sayesinde, diş eti ile dişin dış yüzeyi arasına minimal travmayla nüfuz ederek çevre dokulara zarar vermeden etkili bir şekilde çalışır

Thanks to its extremely thin and sharp blade, it penetrates between the gum and the outer surface of the tooth with minimal trauma, working effectively without damaging surrounding tissues.

PERİODONTOLOJİ

PERIODONTOLOGY

Periodontal küretler, ceplerden ve kök yüzeylerinden diş taşlarını temizler. Kemik küreti, kemikten birikinti ve fibröz dokuyu kazır. Problar, periodontal cep derinliği ve implant uzunluğunu ölçmek için kullanılır.

Periodontal curettes clean calculus from pockets and root surfaces. Bone curettes remove deposits and fibrous tissue from bone. Probes measure periodontal pocket depth and implant length accurately.

MINİMAL GİRİŞİM, MAKSİMUM ETKİ, DDS ART SETİ

Minimal Girişimsel Diş Hekimliğinde Atravmatik Restoratif Tedavi (ART)

Minimal girişimsel yaklaşımları öne çıkaran ART, çocukların yanı sıra yetişkin, yaşlı ve engelli bireyler için de uygun bir restoratif tedavi yöntemidir. ART uygulaması için gerekli el aletleri artık Türkiye’de üretilmektedir.

1. ART Açıcı (Mineye Giriş Kesicisi)

- Tasarım: İki uçlu, piramit biçiminde, dört keskin kenara sahiptir.
- Fonksiyon: Küçük kavite girişlerini açmak ve genişletmek amacıyla kullanılır. Mineyi nazıkçe penetre ederek, döner alet ihtiyacı olmadan giriş sağlanmasına yardımcı olur. Özellikle sınırlı çürüklerde, sağlıklı mine dokusunu koruyarak erişim sağlar.

2. Mine Keskisi

- Fonksiyon: ART Açıcı sonrasında, kavite girişini daha da genişletmek ve kaviteyi çevreleyen desteksiz mine segmentlerini uzaklaştırmak için kullanılır.
- Bu sayede, dolgu materyalinin sağlıklı mine ve dentine tutunacağı sağlam kenar yapısı oluşturulur. Aynı zamanda dolgunun uzun ömürlü olması için gerekli kavite stabilizasyonu sağlanır.

3. Ekskavatörler (Küçük ve Orta Boy)

- Fonksiyon: Yumuşamış ve enfekte dentin dokusunu manuel olarak uzaklaştırmak için kullanılır.
- Farklı boyutları sayesinde, çeşitli kavite derinliklerinde ve alanlarında etkili temizlik sağlar. Döner aletlere ihtiyaç duyulmadan, kontrollü ve güvenli şekilde çürük dokunun uzaklaştırılması mümkündür.

4. Ağız Spatülü

- Çift Fonksiyonlu Uç Tasarımı:
- Uygulayıcı Uç: Karıştırılmış cam-iyonomer simanı kaviteye yerleştirmek için kullanılır. Malzemenin kavite tabanına eşit şekilde yayılmasını sağlar.
- Kazıyıcı Uç: Taşan fazla materyali temizler, kavitenin sınırlarını düzeltir ve estetik/işlevsel bir form kazandırır.

STANDART GRACEY SET (PRC-100)

Gracey küret seti, özellikle derin subgingival ölçekleme, kök düzleştirme ve ileri düzey periodontal tedavilerde yüksek hassasiyet ve etkinlik sağlamak amacıyla tasarlanmıştır. Her bir alet, spesifik diş bölgelerine uyum sağlayacak şekilde özel olarak şekillendirilmiştir.

Gracey küretlerinin en belirgin özelliği, ofset (eğik) bıçak yapısıdır. Bu tasarım, yalnızca alt kesici kenarın kullanılmasına olanak tanır; bu da operatöre diş yüzeyine optimal çalışma açısıyla temas etme avantajı sunar. Böylece diş taşlarının ve biyofilmin etkin biçimde uzaklaştırılması sağlanırken, kök yüzeyine zarar verme riski minimuma indirilir.

Standard 175 mm
PRC-044 $\angle 1:1$

Arka dişlerin distal yüzeylerine ulaşmak için gerekli olan açısı

RİGİD GRACEY SET

Standart Gracey'den daha kalın ve güçlü şafta sahiptir. Daha az esneklik sunar, dirençli dokular için uygundur.

MAKRO GRACEY SET

Terminal şaft, standart modele göre 3 mm daha uzundur. Bıçak %50 daha kısa, %10 daha incedir. Derin ve dar cepler için idealdir.

MİNİ GRACEY SET

Uzun terminal şaftı sayesinde derin ceplere erişimi kolaylaştırır. Kısa bıçak, dar cepler ve furkasyonlarda üstün adaptasyon sağlar.

SİLİKON SAP GRACEY SET (PRC-200)

- Güç iletimi ve hassasiyetiyle etkili ölçekleme ve temizlik sağlar.
- Ergonomik ve hafif silikon saplar, renk kodlama sistemiyle ağız içi bölgelerde kolay kullanım sunar. Yüksek ısıya dayanıklı malzemeden üretilmiştir.
- Silikon Gracey Set, 4 farklı set halinde sunulur:
- Standart, Rigid, Makro ve Mini Set

TİTANYUM İMPLANT SCALERS (PRC-300)

Kesim kenarları, titanyumun ince eleme ve özel bilenme işlemleriyle optimize edilerek üstün keskinlik sağlar. İmplant bakımı için özel olarak tasarlanmış bu çalışma uçları, kalkülüs ve biyofilm temizliğinde yüksek etkinlik gösterir. İmplantlar ve abutmentlerde kullanılan aynı titanyum alaşımından üretilen uçlar, hassas yüzeylere zarar vermeden, paslanmaz çelikten daha yumuşak bir temas sunar.

Bu ince ve hassas uçlar, periodontal ceplere daha derin ve konforlu erişim imkânı tanırken; gelişmiş ergonomik tasarım ve artırılmış görünürlük sayesinde diş hekimlerinin çalışma performansını maksimum seviyeye çıkarır. Sonuç olarak hem hasta rahatlığı hem de tedavi etkinliği en üst düzeye ulaşır.

ATRAVMA TİK RESTORATİF TEDAVİ (ART) – MİNİMAL İNVAZİV YAKLAŞIM

Atravmatik Restoratif Tedavi (ART), diş çürüklerinin yönetiminde minimal invaziv diş hekimliği prensiplerine dayanan modern bir tedavi yaklaşımıdır. Bu yöntem; yalnızca el aletleri kullanılarak minenin şekillendirilmesi, enfekte dentin dokusunun uzaklaştırılması ve kavitenin adeziv bir restoratif materyal ile doldurulması esasına dayanır. Elektrik, su veya döner alet gerektirmeden uygulanabilmesi, ART'nin hem klinik hem de saha koşullarında güvenle kullanılmasını sağlar.

Bilimsel çalışmalar, ART yönteminin özellikle çocuklar, yaşlılar, engelli bireyler ve dental anksiyetesi yüksek hastalarda yüksek başarı ve hasta konforu sunduğunu ortaya koymuştur. Ayrıca ART, pulpa hasarını azaltması, aerosol oluşumu olmaması nedeni ile çapraz enfeksiyon riskini düşürmesi ve gereksiz doku kaybını önlemesiyle "hasta dostu" bir metod olarak kabul edilmektedir.

Steelsa olarak, ART uygulamalarında ihtiyaç duyulan ekskavatörler, mine kesikleri ve diğer mikro-invaziv el aletlerini yüksek kalite standartlarıyla üretmekteyiz. Bu aletler, dayanıklı paslanmaz çelik gövde ile ergonomik tutuş sağlarken hassas kesici uç tasarımları sayesinde çürük dokusunun kontrollü şekilde temizlenmesine ve sağlıklı dentinin korunmasına olanak tanır.

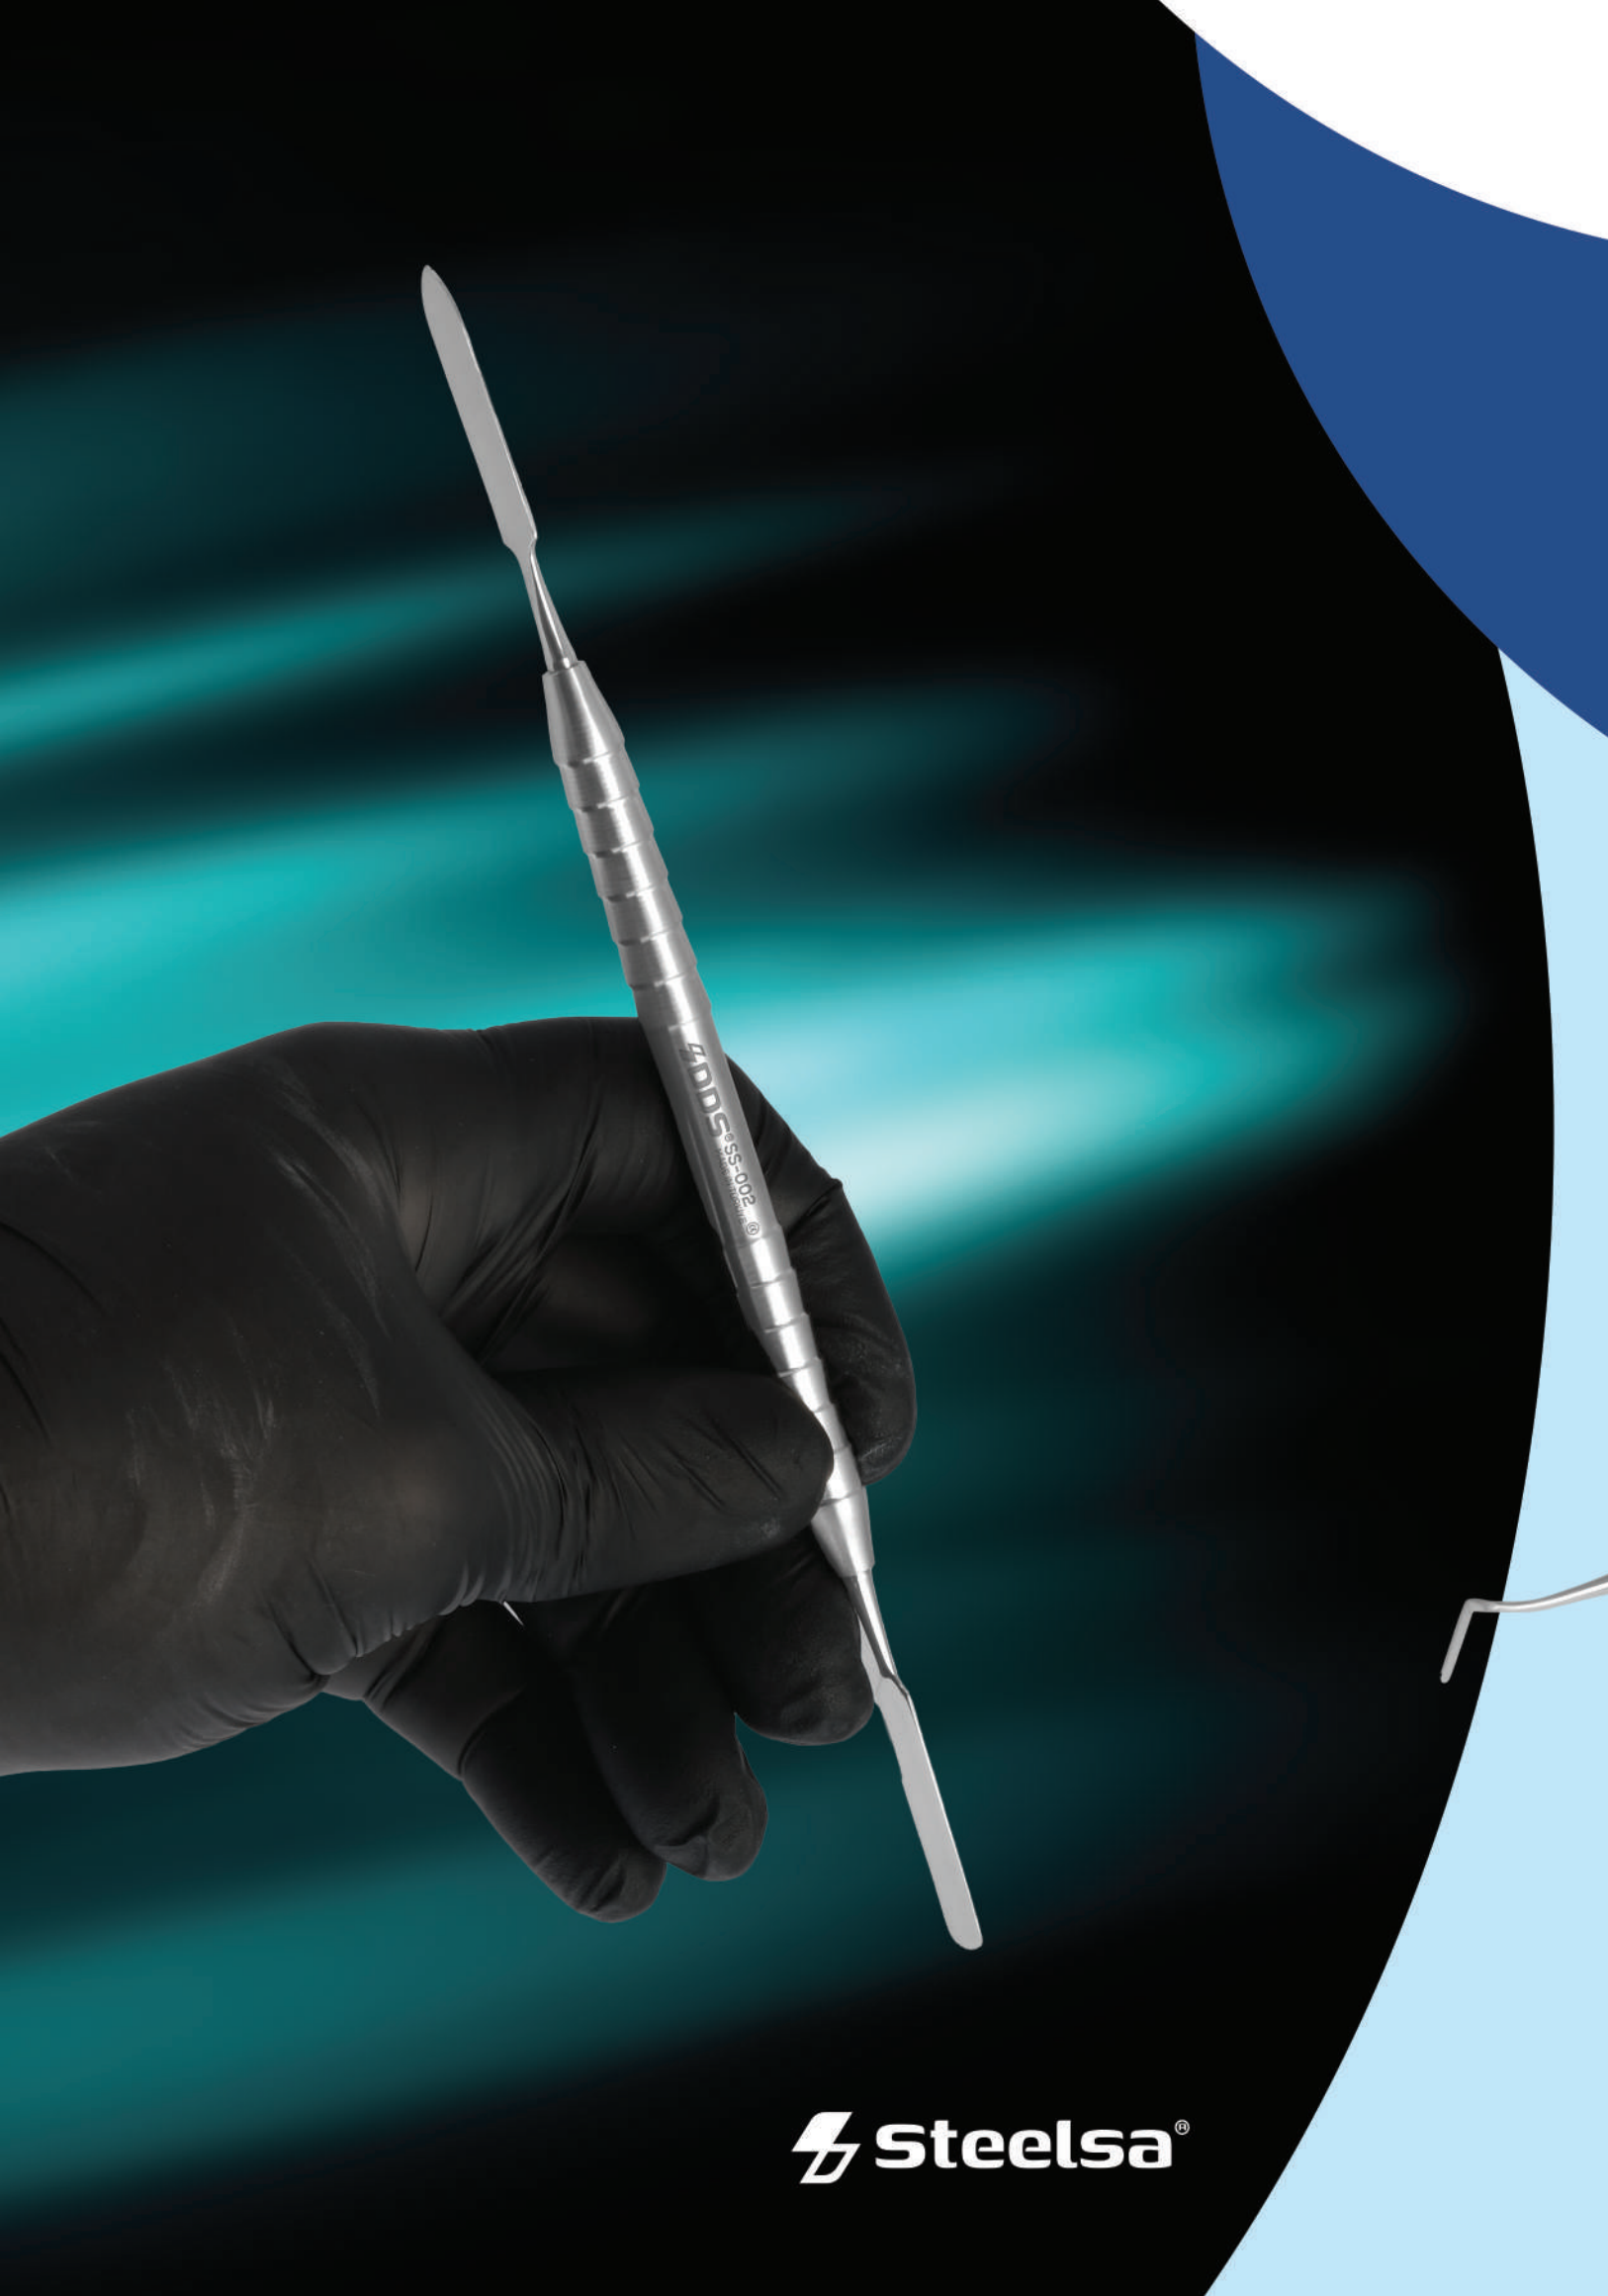

Ürünlerimiz, sterilizasyon koşullarına tam uyumludur ve ISO 13485 kalite yönetim sistemi ile CE standartlarına uygun olarak yerli tesislerimizde üretilmektedir.

Steelsa tarafından üretilen ART el aletleri ile:

- Minimal invaziv yaklaşımı destekleyen keskin ve hassas uç tasarımı
- Kontrollü dentin temizliği ve maksimize edilmiş doku koruması
- Saha ve klinik koşullarında etkin kullanım
- Hasta konforu ve klinik verimlilik bir aradadır.

Doğal dokuyu koru, biyolojik tedaviyi destekle – Steelsa ile ART yaklaşımında güven.

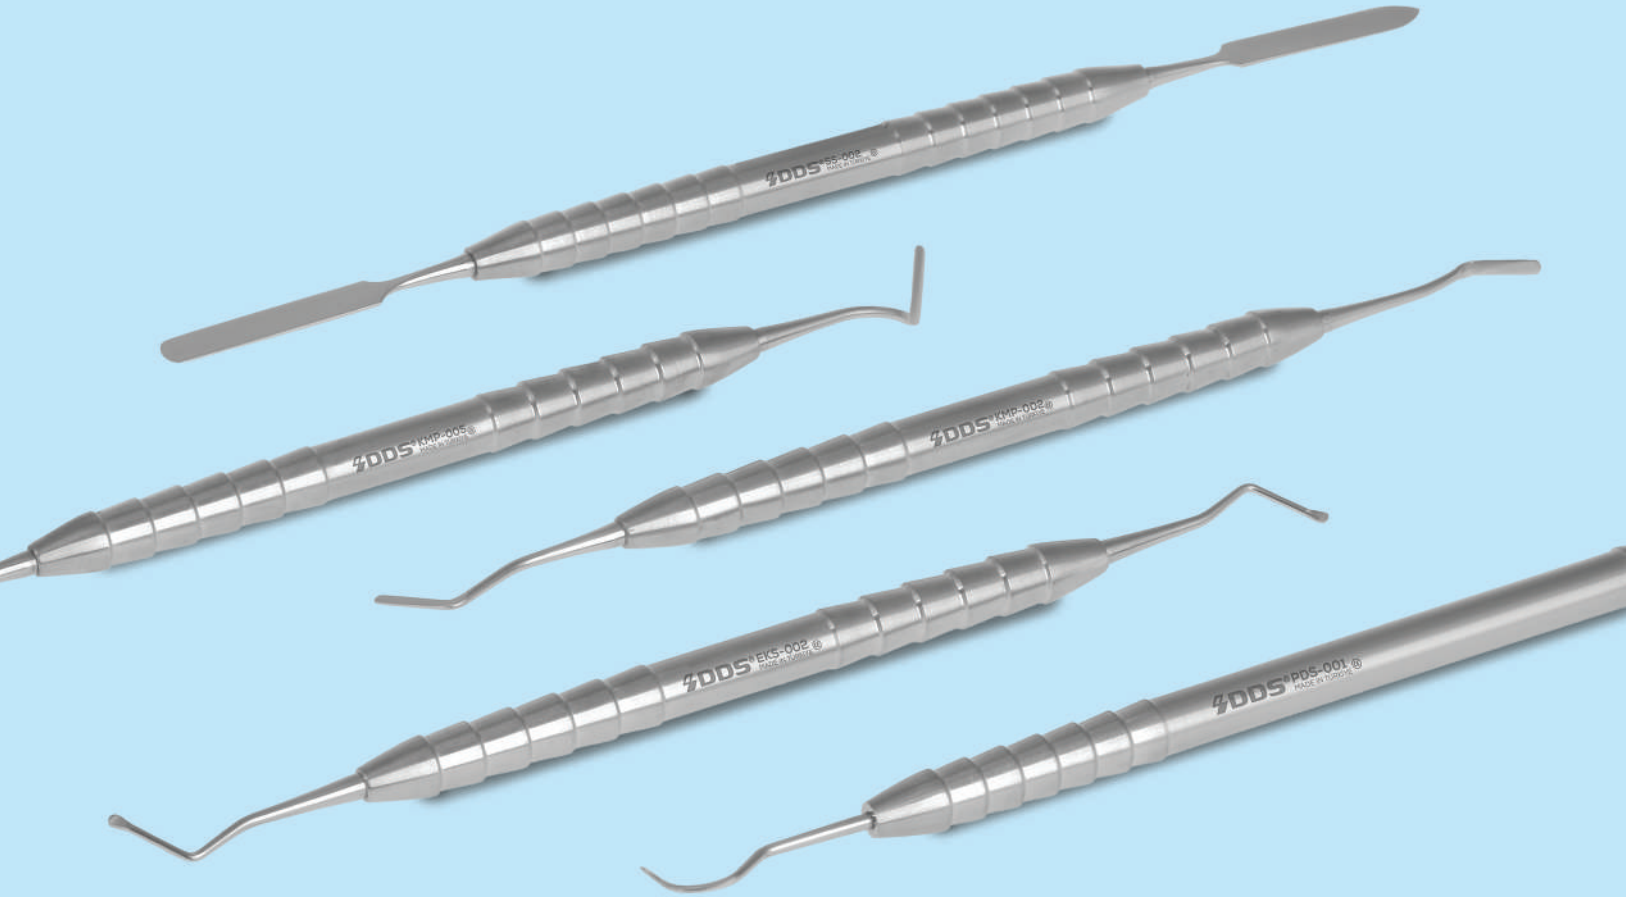

KOMPOZİT EL ALETLERİ

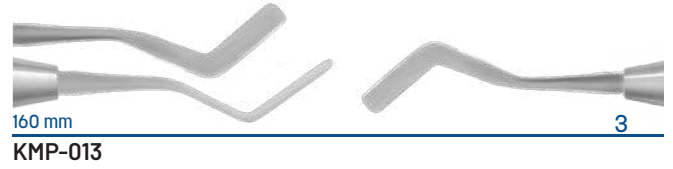

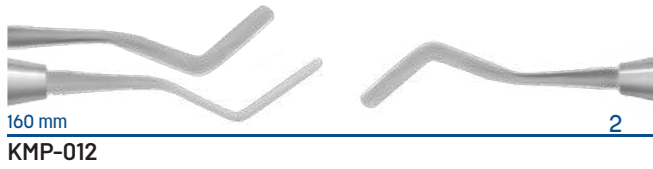

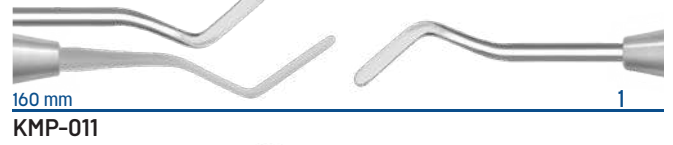

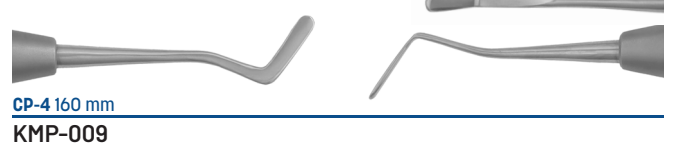

COMPOSITE INSTRUMENTS

Endodontik işlemlerde ekskavatörler, çürük ve yumuşak dentini kavite duvarları ile tabanından kazıyarak dolgulara hazırlık sağlar. Ardından, dolgu malzemesi (örneğin amalgam) yerleştirilir ve kompozit aletlerle şekillendirilip düzeltilir.

In endodontic procedures, excavators remove decay and soft dentin from cavity walls and floors to prepare for fillings. Then, filling materials (e.g., amalgam) are placed and shaped using composite instruments.

KOMPOZİT ŞEKİLENDİRME EL ALETLERİ

Estetik restorasyonlarda doğal anatomi, ideal kontur ve yüksek yüzey kalitesi elde etmek, doğru şekillendirme araçlarının kullanımı gerektirir. Kompozit şekillendirme el aletlerimiz, yüksek kaliteli paslanmaz çelikten üretilmiş olup, el işçiliğiyle gerçekleştirilen özel polisajlı yüzeyi sayesinde kompozit materyalin yüzeye yapışmasını en aza indirir ve daha hızlı, daha temiz çalışma imkânı sunar.

Ergonomik ve dengeli sap tasarımı; hassas hareket kabiliyeti, kaymaz tutuş ve uzun süreli işlemlerde bile minimum el yorgunluğu sağlar. Modern restoratif prensiplere uygun form yapısı, doğal ışık kırılımını destekleyen doğru anatomik modellemeyi mümkün kılar.

Uluslararası kalite standartlarını karşılayan üretim yaklaşımımız doğrultusunda tüm ürünlerimiz, yerli üretim tesislerimizde ISO 13485 kalite yönetim sistemi ve CE standartlarına uygun olarak titizlikle üretilmektedir.

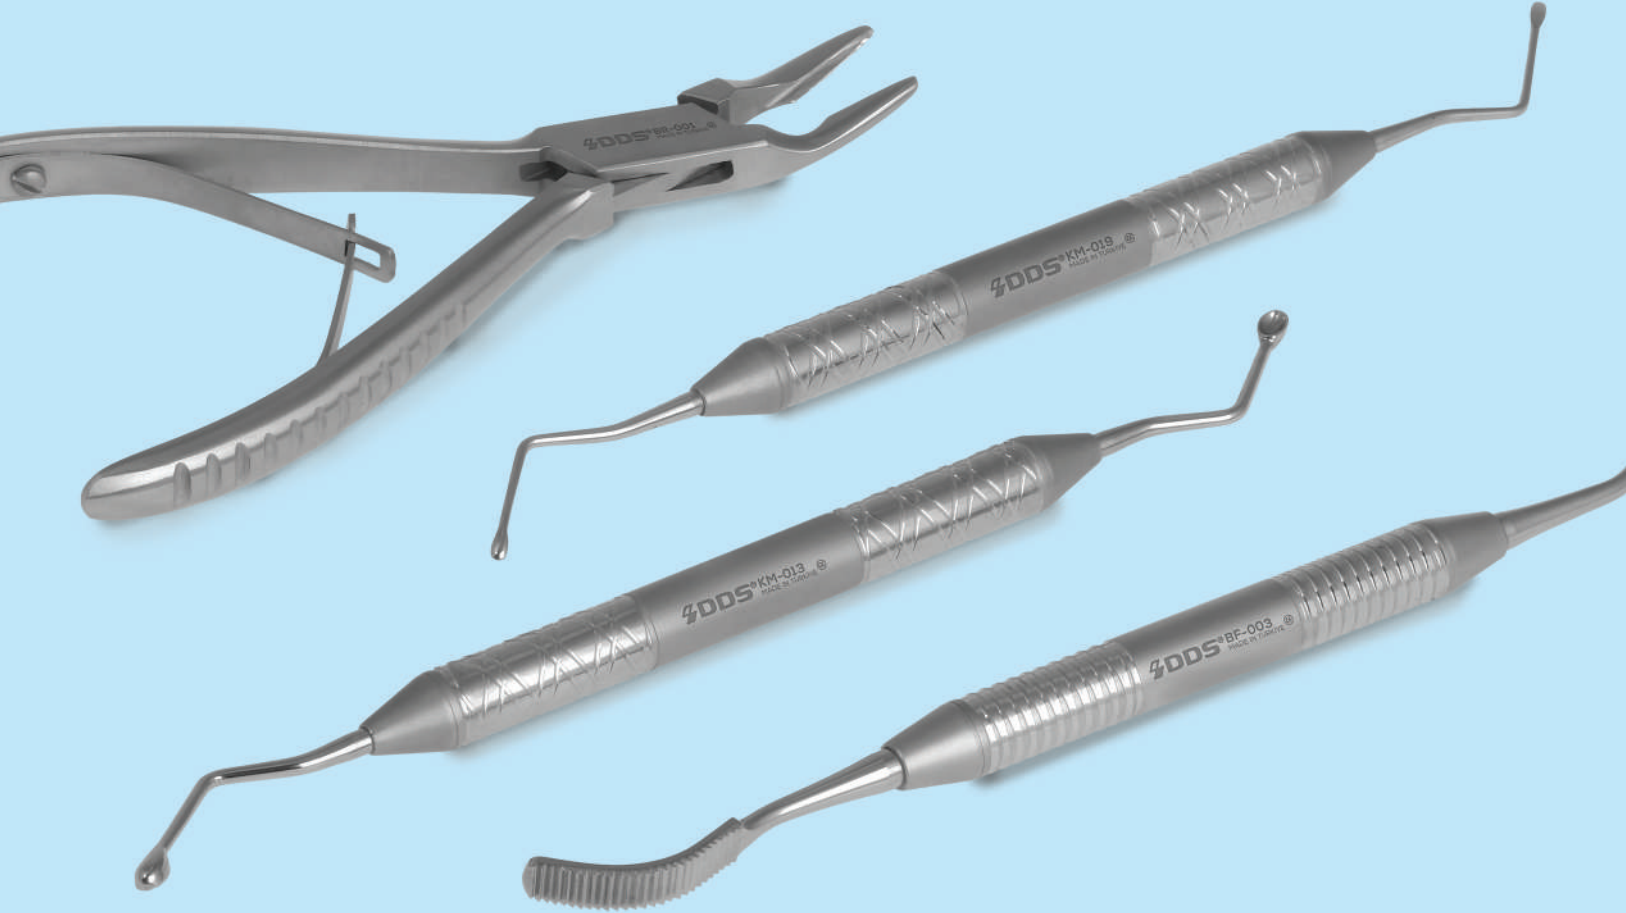

KEMİK KÜRET, EĞE VE PENİSİ

BONE CURETTE, FILE AND RONGEUR

Kemik eğeleri, kemik yüzeyini kazıyıp düzleştiren manuel aletlerdir. Kemik küreti, istenmeyen doku ve birikintileri temizler. Kemik pensisi ise diş çekimi sonrası kretindeki keskin kenarlar için kullanılır.

Bone rasps are manual instruments used to scrape and smooth bone surfaces. Bone curettes remove unwanted tissue and debris. Bone forceps (rongeurs) are used to smooth sharp edges of the alveolar ridge after tooth extraction.

Hassasiyetin ve Kontrolün Buluştuğu Nokta

Cerrahi işlemlerde maksimum kontrol ve konfor için özel olarak geliştirilmiş bistüri sapı. Ergonomik yapısı sayesinde el yorgunluğunu azaltır, uzun süreli kullanımlarda bile hassasiyet ve denge sağlar.

165 mm Otomatik Bistüri Sapi
SRG-244 

G-245  1:1

The image displays the DDS SRG-245 dental curing unit, a handheld device with a textured grip and a control knob. It is accompanied by four interchangeable curing tips: two with straight ends and two with curved ends. A separate, flat, rectangular curing tip is also shown. The device is labeled "4DDS® SRG-245" and "MADE IN KJ1901-E".

ÇENE CERRAHİSİ

MAXILLOFACIAL SURGERY

Çene Cerrahisi, her yaş grubundaki bireylerde ağız, diş ve çene bölgelerindeki yumuşak ve sert dokuların hastalıkları, yaralanmaları ve bozukluklarının tanı ve tedavisinde kullanılan cerrahi yöntemlerle ilgilenen alandır.

Oral and Maxillofacial Surgery is the field that focuses on the diagnosis and surgical treatment of diseases, injuries, and disorders affecting the hard and soft tissues of the mouth, teeth, and jaw in individuals of all age groups.

DDS ÇENE CERRAHİ EL ALETLERİ

Hekimin hassasiyetini artırmak, operasyonu güvenli ve kontrollü şekilde gerçekleştirmek için özel olarak üretilmiştir.

KASET CASSETTE

Cerrahi Kaset, dental ve ağız cerrahisinde kullanılan aletlerin sterilizasyon ve işlem sırasında düzenli, güvenli ve hijyenik bir şekilde saklanması sağlayarak, klinik çalışma verimliliğini artıran bir sistemdir.

Surgical Cassette, dental and oral surgical instruments are organized and securely stored during sterilization and procedures, ensuring hygiene, protection, and efficient workflow in clinical practice.
